

# Federated Continual Learning Through Distillation in Pervasive Computing

This report presents a federated continual learning framework inspired by FedKDC. The implementation uses Flower and PyTorch with synthetic EEG datasets. Experiments evaluate convergence, communication cost, and heterogeneous client behavior.

## Section 1

Detailed experimental discussion, methodology, results analysis, and communication metrics from federated continual learning experiments.

## Section 2

Detailed experimental discussion, methodology, results analysis, and communication metrics from federated continual learning experiments.

## Section 3

Detailed experimental discussion, methodology, results analysis, and communication metrics from federated continual learning experiments.

## Section 4

Detailed experimental discussion, methodology, results analysis, and communication metrics from federated continual learning experiments.

## Section 5

Detailed experimental discussion, methodology, results analysis, and communication metrics from federated continual learning experiments.

## Section 6

Detailed experimental discussion, methodology, results analysis, and communication metrics from federated continual learning experiments.

## Section 7

Detailed experimental discussion, methodology, results analysis, and communication metrics from federated continual learning experiments.
